

ACM WebSci '11

3rd International Conference on Web Science

KOBLENZ, GERMANY, June 14-17

ACM WebSci '11 is concerned with the full scope of socio-technical relationships that are engaged in the World Wide Web. It is based on the notion that understanding the Web involves not only an analysis of its architecture and applications, but also insight into the people, organizations, policies, and economics that are affected by and subsumed within it. As such Web Science, and thus this conference, is inherently interdisciplinary and integrates computer and information sciences with a multitude of disciplines including sociology, economics, political science, law, management, language and communication, geography and psychology. This conference is unique in the manner in which it brings these disciplines together in creative and critical dialogue.

UNESCO because of its landscape that has been uniquely shaped by nature and culture. Koblenz is easy to get to being within one hour's reach from two international airports (Frankfurt am Main and Cologne).

Key Topics

- The pro-human web in an unequal world: access, inequalities and agendas for change
